

## Scality for Compliance Archives

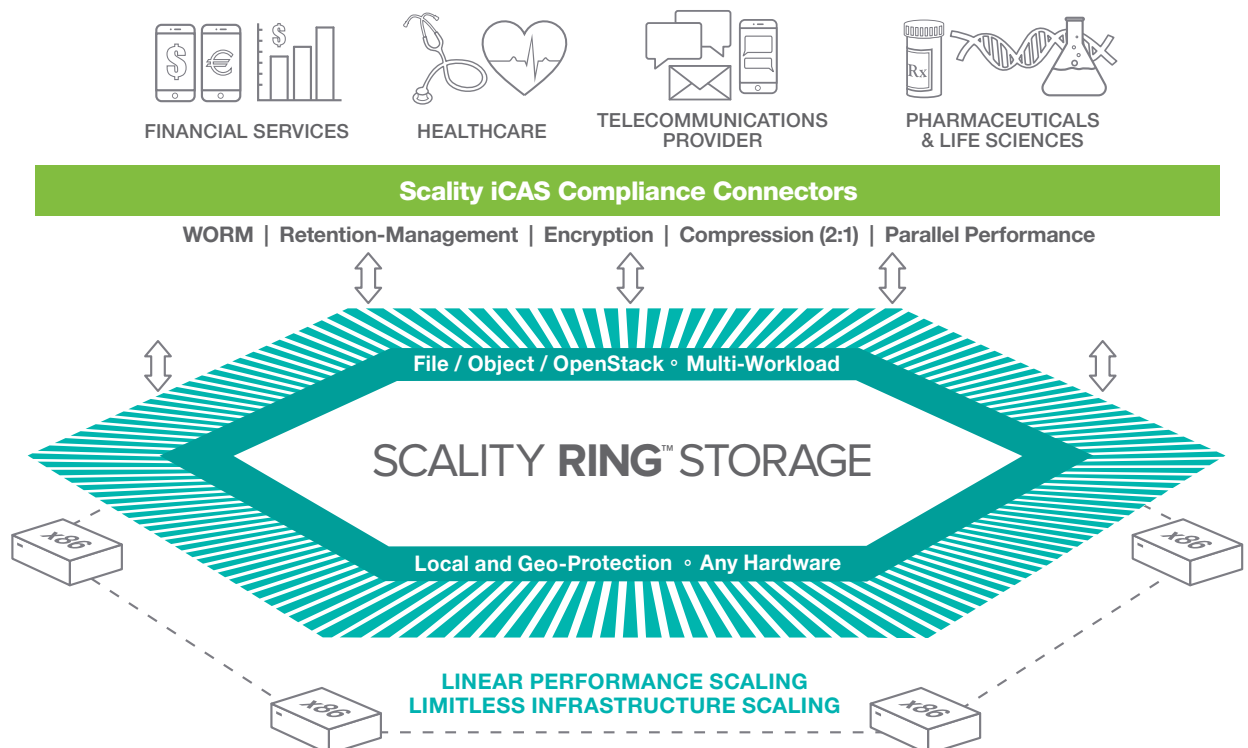

### Manage evolving compliance regulations and data growth with agility and petabyte-scale

HIPAA, GxP, SOX, SEC 17a-4, PCI-DSS – these are but a few of the key compliance regulations that have been introduced in the last 20 years. Many of these regulations require a combination of immutable storing, logging, audit trails, and the ability to retrieve specific information promptly in the correct format. In most industries, specific rules apply, increasing the complexity of meeting compliance. In highly regulated markets like healthcare, financial services, pharmaceuticals, and life-sciences, many terabytes of data are generated, requiring compliant storage solutions that can span decades of retention periods.

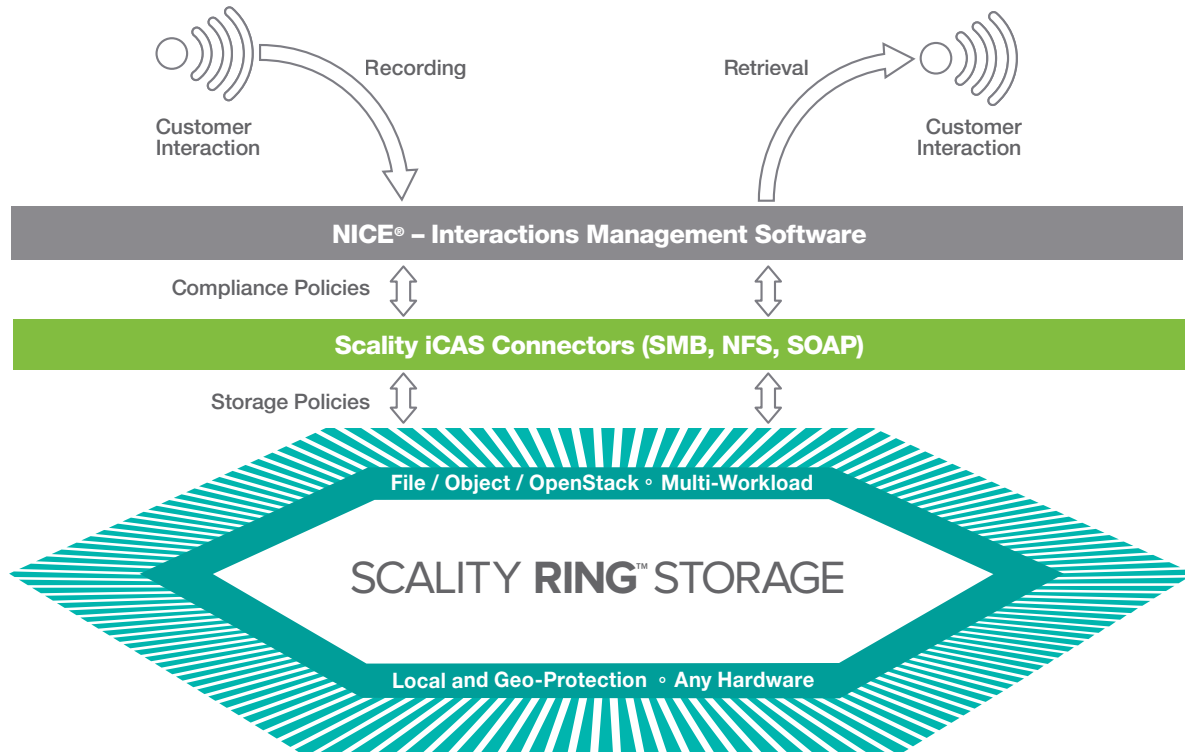

Most enterprises have tackled compliance organically, application by application, resulting in many disparate and underutilized storage silos. Worse, some businesses have been locked into end-of-life storage appliances like Centera, which have proprietary interfaces and metadata that make it very difficult to migrate out.

The Scality iCAS Compliance Solution is the most flexible and scalable solution available on the market today. With validated and certified integration of many key applications like GE, AGFA and Philips PACS in healthcare, and Veritas EV, HPE Records Manager, and OpenText in financial services, the Compliance Solution enables petabyte-scale data consolidation and future growth on a **standards-based platform** that runs on **any standard x86 hardware**. This enables compliance and agile growth at significantly lower TCO.
