

Scality Ring & Storage Made Easy

Enterprise File Sync and Share for Object Storage

Organizations now have greater visibility on the benefits provided by object-based storage solutions regarding scalability and lower costs. The problem with moving to a new storage solution is that user workflows and applications may need modification. A modern and well designed solution will be able to bridge the gap between the application and the object storage layer without affecting the user.

Scality and Storage Made Easy partnered to create a joint solution that will enable users across cloud and object storage environments to easily and securely access, store, and share files from any desktop or mobile device. The solution brings enterprise file sync and share, collaboration, and cross-cloud migration capabilities to the Scality RING platform.

Storage Made Easy can provide users access to their data through desktop applications like a network file system with native drive access for Windows, Mac, and Linux with file locking, versioning, commenting, and permission capabilities. Data can be synchronized locally and shared globally through native integration with Microsoft Office, OpenOffice, and Mac Mail.

The combined solution will also enable organizations to collaborate efficiently through desktop and web-based tools and via mobile applications and devices. Features that will enhance day to day activities include markup and PDF annotation, file activity monitoring, full text search, and leverage archives and audit logs as needed.

Storage Made Easy will also enable organizations to migrate to a highly scalable object-based storage solution such as the Scality RING from existing storage. The combined solution will help any business be agile and reduce operating costs and the complexity of storage at a large scale.

What's In It for You?

Truly Scalable Storage The RING enables organizations to build a private cloud storage solution at exabyte-scale with all the performance benefits of online storage at a cost point that is comparable to tape. The RING's access and storage layers can scale independently to thousands of nodes, all of which can be accessed directly and concurrently.

Storage Made Easy for IT Finally, organizations have the ability to enforce data security policies across legacy, private and public cloud storage providers in one place. IT can enforce access, sharing, and encryption policies across the Scality RING. Want to limit downloads or reject weak passwords? No problem! Audit trails and archive capabilities provide peace of mind.

Data Protection SME user data will be protected with strong data protection mechanisms in the event of common failure scenarios such as a node or disk failure. The Scality RING uses erasure coding and replication to protect data across sites and also has automatic data repair mechanisms in place to tolerate an entire physical site failure.

Sync and Share as a Service With fully multi-tenant and brandable desktop and mobile applications, service providers and enterprises can offer new storage services backed by the Scality RING. Offer tiered services including home folders for user documents, mobile apps for access anywhere, and sync & share offerings for collaboration – new revenue streams!

About Storage Made Easy

The Storage Made Easy Enterprise File Fabric allows IT to regain control of cloud and storage sprawl unifying private and public file and object storage into a single converged infrastructure that can be more easily be managed, supporting organizational governance and audit controls. Users can securely sync files, share and collaborate through native desktop and mobile applications, Office plugins and O/S drives. The company focuses on two large and emerging markets. The first is data security, encompassing governance and compliance, and the second is the large and growing cloud market (public and private) for which SME has a large footprint and strong channel partners. About Scality

Scality, world leader in object and cloud storage, develops cost-effective Software Defined Storage (SDS): the *RING*, which serves over 500 million end-users worldwide with over 800 billion objects in production; and the open-source S3 Server. Scality RING software deploys on any industry-standard x86 server, uniquely delivering performance, 100% availability and data durability, while integrating easily in the datacenter thanks to its native support for directory integration, traditional file applications and over 45 certified applications. Scality's complete solutions excel at serving the specific storage needs of Global 2000 Enterprise, Media and Entertainment, Government and Cloud Provider customers while delivering up to 90% reduction in TCO versus legacy storage. A global company, Scality is headquartered in San Francisco.
